

# When it Comes to Sustainability...

## How Does Orlando's Nationally Recognized Science Center Measure Success?

### In the energy it creates...

The Orlando Science Center partnered with OUC—The *Reliable One* to build a rooftop solar array that generates renewable energy and helps power the Dr. Phillip's Cinedome. This solar array is also used to educate visitors about the benefits of renewable technologies, showing that becoming more sustainable means measuring what matters... *and energizing future generations.*

To learn how you can use the power of the sun to energize your home or business call 407.434.2263 or email [green@ouc.com](mailto:green@ouc.com).

*"The Orlando Science Center is a great place to engage people in hands-on exploration of science, but we can also be a strong community forum for how we can all use science and technology to make our world better. OUC—The Reliable One is helping us achieve that goal."*

*—JoAnn Newman, President of the Orlando Science Center*
